

Boom Lift License Edmonton

Boom Lift License Edmonton - Only completely qualified persons must operate an aerial boom lift. Qualification could be attained through a combination of classroom sessions and practical training with the specific type of aerial lift which will be utilized on the job. A License is required for anyone who works on or operates an aerial boom lift.

Vehicle-mounted aerial devices consist of the following work vehicles: aerial ladders, extensible boom platforms, vertical towers, articulating boom platforms, and whatever combination of these types.

When using a boom lift, there are several basic safety regulations which apply to all boom lifts. Safety of the worker is a top priority while they are working in the basket. The worker must at all times wear a body harness and lanyard, attaching it to the boom or basket. Never tie off to a structure, equipment or an adjacent pole. Personnel should stand on the basket floor, and never sit or climb on the edge of the basket. The load limitations of the manufacturer must be followed.

Aerial lift operators should be authorized to make use of the equipment. The operator has to be familiar with all the aspects of the device and must have access to the manufacturers instruction manual which must be kept inside the lift. Operators are responsible for ensuring that safety measures are followed in operating the lift. A daily test of lift controls should be carried out. Set brakes and position outriggers (if they are used) on pads or a stable surface. If working on a slope, utilize wheel chocks.

The aerial lift vehicle must never be moved while a worker is inside the basket of an elevated boom, unless they are utilizing machines which are particularly designed for this. Extensible boom platforms and articulating boom used as personnel carriers must have accessible, plainly marked, upper controls. Except in emergency circumstances, lower controls should not be used to override upper controls unless the individual within the lift gives authorization.

While working from an aerial lift, do not wear pole or tree climbers.

The insulated part of the aerial lift should not be altered.

Do inspect the booms to make certain that it is correctly cradled and the outriggers are in the stowed position prior to moving.

When operating a boom lift next to power lines, make certain that the lines are di-electrically tested according to local rules.
