

Boom Lift Training Edmonton

Boom Lift Training Edmonton - Aerial platforms or also known as elevated work platforms are devices that enable workers to carry out duties and tasks at elevated heights which would not be otherwise accessible. There are many aerial lifts on the market to carry out different applications under different site conditions. If operated carelessly, elevated work platforms could result in fatality or serious injury. The most common causes of related accidents are electrocution, falls, tip-overs and crushed body parts. Lift operators should be fully trained in procedures to be able to avoid accidents during the operation of lifts.

Aerial Lift Safety course is designed for people who need to operate the devices more safely and effectively. The course provides thorough instruction about the most utilized lifting devices within the industry.. Types of lift covered consist of boom supported, scissor and articulating aerial lifts. The video presents the proper methods operators should follow. Instruction focuses on protection against falls, pre-operational check, stability of the device and safe driving procedures.

The boom lift training course would help to deal with equipment reliability and employee safety, using materials that are completely compliant with your local and regional requirements and regulations. Course management and training techniques would be taught. The trainer would likewise become well versed in the technical aspects of aerial lift safety.

Components of the Boom Lift Training course comprise both practical training and classroom training. Both sessions should be finished successfully for the participant to receive a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms can be positioned completely beyond the base of the equipment. The theoretical part of the training is nearly identical for both types. The practical part of the training could be completed sooner if only one kind of machinery is used.

Elevating Work Platform Training Program Objectives:

For the safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training will help operators use their machinery more effectively and would decrease the possibilities of workplace accidents. Trainees will review of business policies and applicable regulations, talk about Due Diligence, study Criminal Negligence and consequences to employers, trainers, supervisors and workers. Participants will review machine features, operating procedures, stability, charging/fueling procedures and parking. Site-specific safety problems will be dealt with.
